Abstract

This paper announces the discovery of the use of neural nets almost 4,000 years before their use in the modern era. Newly discovered tablets preserve a perceptron used for calculating the numbers on Plimpton 322, the most important object in the history of mathematics. The native programming language used by the ancient Babylonian "cuneogrammers" uses sexagesimal numbering leading to some "weirdness".

1 Introduction

(Robson, 2002)

2 Discovery

Museum of the Sealand

3 Technical Description

(of the Language)

- compare the table of params at the end of the file to tables of astronomical parameters from genuine tablets

4 Implications

This completely rewrites the history of modern computing...

Other ancient corpora which have resisted decipherment, and which boast a similar numeric component, may represent additional examples of ancient programming traditions.

Acknowledgments
